EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Robert Weilacher on September 25, 2007.

The application has been amended as follows:

CLAIM 2 is cancelled.

CLAIM 1 (currently amended) A process for carrying out a reaction between at least two fluid reactants in a reactor having a plurality of wall elements, each of the wall elements comprising a plurality of tubular cavities being parallel to each other for conducting a fluid heat-exchange medium there through and a plurality of slot-shaped reaction spaces,

- a) each of said slot-shaped reaction spaces is formed by the lateral surfaces of two spaced apart, substantially equally large and substantially right-parallelepipedal wall elements made of solid plates and wherein the wall elements are arranged interchangeably in a block within a virtual right parallelepiped, comprising
- b) introducing the reactants into the slot-shaped reaction spaces from edge regions situated on the same side of the block and conducting said reactants through the reaction spaces as a reaction mixture in the same directions in parallel flows, ~~and~~
- c) conducting the fluid heat-exchange medium through the tubular cavities,

Art Unit: 1764

extending in the interior of the wall elements to thereby obtain a desired reaction, and
d) supplying at least one reactant through the wall elements and into the reaction
space through at least one of the lateral surfaces of the wall elements,

wherein the slot-shaped reaction spaces have a slot width of between 0.05 and 5 mm,
whereby in case of explosive reaction mixtures the slot width of the slot-shaped reaction
spaces is chosen sufficiently small in order to avoid spreading of flames.

The following is an examiner's statement of reasons for allowance:

Claims 17, 19-21, 23-33, 35 and 36 are allowable. The prior art does not disclose or adequately suggest the instantly claimed apparatus for carrying out a reaction comprising the claimed combination of features, wherein, in particular, the plurality of slot-shaped reaction spaces are formed by the lateral surfaces of two spaced apart, substantially equally large and substantially right-parallelepipedal wall element made of solid plates, and each wall element comprises at least one feed channel that leads into the reaction space through at least one of the lateral surfaces of the wall element.

Claims 1, 3-5 and 7-16, previously withdrawn from consideration as a result of a restriction requirement, require all the limitations of allowable claim 17. Pursuant to the procedures set forth in MPEP § 821.04(a), the restriction requirement between inventions I and II, as set forth in the Office action mailed on September 27, 2004, is hereby withdrawn and claims 1, 3-5 and 7-16 are hereby rejoined and fully examined for patentability under 37 CFR 1.104. In view of the withdrawal of the restriction requirement, applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all

Art Unit: 1764

the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
